

transmission facility to the end-user device upon authentication; and

receiving the Internet response data responsive to a data request of the end-user at the transmission facility.

30. (Once Amended) The method for routing Internet response data as set forth in claim 29, further comprising:

modulating the Internet response data in order to transmit the Internet response data over a wireless transmission link.

31. (Once Amended) The method for routing Internet response data as set forth in claim 29, wherein

the transmission facility is a satellite uplink facility.

32. (Once Amended) The method for routing Internet response data as set forth in claim 30, wherein

the wireless transmission link is a satellite transmission link.

33. (Once Amended) The method for routing Internet response data as set forth in claim 29, further comprising:

modulating the Internet response data using a first modulation protocol;

converting the Internet response data modulated using the first modulation protocol into Internet response data modulated
